PSLED/DIM

NOW AVAILABLE! Dimmable Constant Current driver for LED lighting.

Hera's brand new PSLED/DIM is the latest addition in dimmable LED lighting solutions. Now any Hera solution that plugs into a PSLED may be dimmed using the PSLED/DIM. Plus there's a bonus: The PSLED/DIM supplies 18 Watts of LED lighting, twice the standard capacity. This higher output is also available in the non-dimmable PSLED/18 model. The DimControl is a cabinet mount control that allows standard rotary adjustment of the desired light level. The wiring for this control is "Class 2" which makes the system easier to install because it's plug and play. The dimming capability of the system is 10 – 100%. It's ideal for applications that require setting a custom light level with low energy consumption. Each output terminal block contains three connections for a total of 9 Watts per terminal block and 18 watts per driver. For large systems incorporating multiple dimmable drivers, up to 40 drivers can be connected to one DimControl using additional accessories.

Product Features

- 120V 60Hz
- Use with 350 mA Constant Current LED fixtures
- For connections of up to 18 W high-power LEDs
- Overload protection
- Overheat protection
- Short-circuit protection
- Soft Start for maximum LED life
- 79" plug-in power cord
- Two attached terminal blocks for 3 x LED spotlights each
- Additional terminal blocks available
- Use with 1-10V DimControl interface for dimming functionality
